

## **Axe-Wax Oilfield Services**

### **Finalist for the Saskatchewan Research Council Award for New Saskatchewan Product**

Operational since March 2009, Axe-Wax Oilfield Services has developed a mobile chemical pumping unit that is set up to haul and pump chemicals in well bores. Through this service Axe-Wax has given clients the ability to expand the type of product used while simultaneously reducing costs and improving safety.

This new service, which uses the latest data acquisition systems and features remote monitoring, is focused on helping maintain carbon capture technology employed by oilfield companies. Using existing technologies, the product employed has been assembled in a non-typical configuration.

As more carbon capture projects get underway there will be room to expand further. Most of the key research and leg work for this initiative was done in Saskatchewan and Saskatchewan-based businesses were used to acquire parts and services.
